## PROFILE

I had my first contact with programming language in my 1<sup>st</sup> year of studies. I remember this discovery to be full of fun, excitement and satisfaction.

Since then, I have been learning and using programming languages on and off, mostly for personal purposes. I am more of scientific mind, but at the same time I really enjoy creative activities. I find IT appealing, as it combines these features - logic, math, science and creativity in one field. This is why I would love to find my own place and satisfactory job in the IT industry.

In order to pursuit dream of career change, I have quitted my previous job and I have been self-studying. I am aware this is just the beginning of my journey and there is lots work ahead, but I am eager to learn, grow, and work hard to get there.
